Configuration

Prisma Postgres

Your Prisma workspace is connected to Netlify.

Workspace: Personal workspace

Status: **connected**

Link: [Manage your Prisma workspace](#) ↗

Extension details

Prisma Postgres for Netlify

Connect your Netlify site to a fully-managed [Prisma Postgres](#) ↗ database with this extension. Seamlessly integrate your preview and production environments.

Features

- Automatic generation of Prisma Postgres API keys for preview and production environments.
- Simplified environment configuration for your Netlify site.

Usage

Install the extension

To install the extension, click **Install** at the top of this page.

Add the Prisma Platform integration token to your Netlify team

Perform the following steps **once** to connect your Netlify team with a Prisma Platform workspace:

1. Log in to your [Prisma Console](#) ↗ .
2. Select the workspace you want to connect to Netlify.
3. Navigate to the **Integrations** menu in the left-hand sidebar.
4. Follow the prompts to create a new Netlify integration token and copy the token value.
5. Paste the token into the **Integration Token** field above. The workspace ID will be automatically filled in.
6. Click **Save** to complete the setup.

Once this setup is complete, your Netlify team is connected to your Prisma workspace. You can now configure individual Netlify sites to use Prisma Postgres.

Add Prisma Postgres to a Netlify site

Perform the following steps *for every Netlify site* in which you want to use Prisma Postgres:

1. Go to the site view in Netlify and click **Prisma Postgres** under the **Extensions** section.
2. From the **Project** selector, choose the Prisma project you want to connect to your Netlify site.
3. Configure the environment for your **Production environment**.
4. Configure the environment for your **Preview environment**.
5. Click **Save** to complete the site setup.
6. The extension will automatically create Prisma Postgres API keys and store its connection URL in the `DATABASE_URL` environment variable.

Ensure your project uses the `DATABASE_URL` environment variable

Ensure that the data source in your `schema.prisma` file is configured to use the `DATABASE_URL` environment variable:

```
// schema.prisma
generator client {
  provider = "prisma-client-js"
}
```

```
datasource db {  
  provider = "postgresql"  
  url      = env("DATABASE_URL")  
}
```
